

Parks Upgrade 1 C - Solar Lights for Park Pathway

Committee: Parks and Recreation

Project Title: Parks Upgrade 1 C - Solar-Powered Lights for Los Paseos Park Pathway

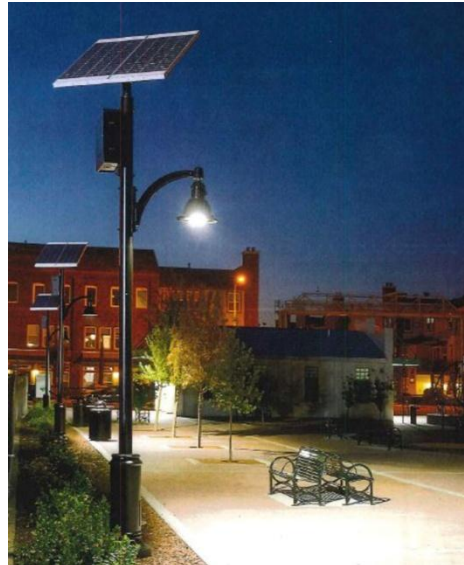

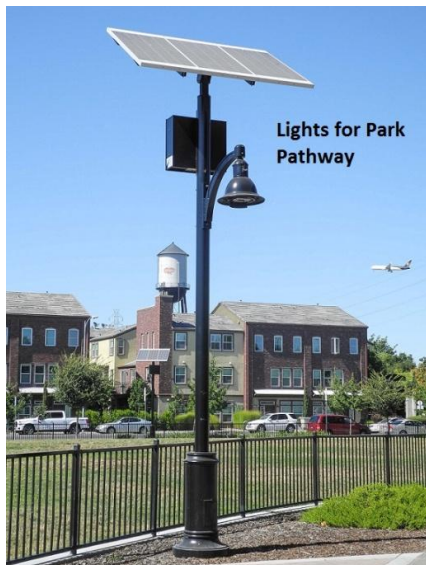

Cost: \$75,000

Location: Los Paseos Park

Short Description: This project will install solar-powered, motion-activated, LED lights along the path from the tennis courts to the restroom building at Los Paseos Park. The lights will improve safety on a well-used walkway.

Long Description: The Los Paseos pathway was designed as an extension of the Paseos and as a connection between the neighborhood and shopping, schools, and the tennis courts. The path is also used by fitness walkers as well as dog walkers, since there is no dog park in the neighborhood. As a connecting walkway, the path is used at all times of the day, including after dark. Being able to use the path in the dark is particularly important during the seasons when the days are shorter. Although the Paseos have lights, the park path does not. The community views the lack of lighting as a safety issue.

This proposal will install **3 solar-powered LED lights** along the path from the tennis courts to the restroom building. The lights are self-contained and no electrical work will be required in the installation. The lights will be motion-activated, which will reduce the risk that the lights might attract inappropriate behavior.
